

How Biomaster works

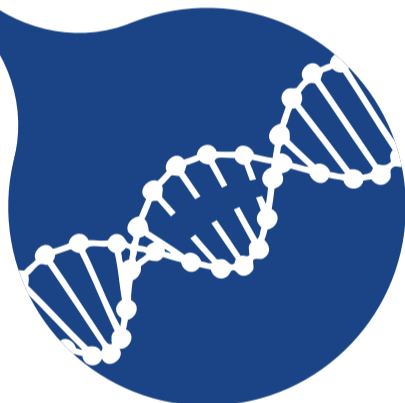

1 Biomaster binds to the cell wall disrupting growth

2 The Biomaster ions interfere with enzyme production stopping the cell producing energy

3 Biomaster interrupts the cell's DNA preventing replication

Bacteria lands on a **Biomaster** surface....

the bacteria can't survive

Durable product protection

base material

Biomaster can be added at any stage of manufacture...

biomaster additive

...and goes **IN** your product not **ON** it, giving **permanent product protection**
